

VISION MADE REAL

OKITE®

What is OKITE®

OKITE® is a surface that, quite simply, is the stuff of dreams. It lights up kitchens, dining areas, bathrooms or any other area of a home. It's a unique compound of polymer resin and up to 93% quartz, one of the toughest and most naturally attractive of all minerals.

It's highly heat, stain and scratch resistant and is extremely durable – five times stronger and more durable than granite – and non-porous.

It never needs sealing. Plus, it's remarkably easy to clean and maintain. In short, it's a luxurious material like no other. OKITE® is kinder to the environment, too. From sustainably sourced quartz to recycled glass, from our quality-certified cleaner production processes to our continuous quest for more efficient use of natural resources, our commitment to the planet and people is at the heart of everything we do.

Total practicality

It's a fact. Pristine surfaces will invariably get soiled. They'll suffer the occasional liquid spillage. And hard objects will be scraped or dropped on them from time to time.

It's a good thing, therefore, that the quartz in OKITE® is the fourth hardest material known to man. OKITE® is five times stronger and more durable than granite, making it remarkably tough to scratch. It never needs sealing, so it's also very stain resistant, offering far higher levels of protection against oil, coffee, wine and soft drinks, for example.

OKITE® is also certified as a safe and hygienic product for use in food preparation areas. Its non-porous surface resists staining and prevents absorption of moisture or food which can harbour harmful bacteria. As a result, there's no need to use any protective chemicals, making it safer for you and your family.

All it needs to keep it in prime condition is the occasional wipe – beautiful design at its most convenient.

Gentler on the environment

OKITE® has been certified, by the leading international certification bodies and institutes, as a safe and healthy product, ideal for the installation in schools and hospitals.

- **Certified to ISO 14001 standard** – The environmental protection standard in industry. Covering all internal and external procedures, it ensures safety for all our workers and an environmentally friendlier production process requiring almost no detergents.
- **Health certificate:** according to **NSF**, OKITE® is a safe and healthy product which lends itself to the installation and use in areas destined to food preparation, both at home and in cafés or restaurants. Its non-porous surface, in fact, is stain-resistant and prevents the absorption of moisture and food residues which may result in the formation of harmful bacteria;
- **Safe use of OKITE® in schools and indoor spaces:** the **GREENGUARD** Environmental Institute has approved the use of OKITE® in indoor spaces and schools. The product does not contain or release any hazardous volatile organic compounds, according to the strict standards established by the GEI;
- **Total compliance with the EU standards on good manufacturing practices (GMP):** SEIEFFE voluntarily and regularly checks the compliance of manpower, training, raw materials, packaging and manufacturing processes. The reference standards are the GMPs, established by the 2023/2006 European Commission Regulation.
